*I*n preparing this list of Fall bulbs we have again added to the older tried varieties some of the newer sorts which we have selected for their outstanding characteristics and merit.

We have received word from our grower in Holland that bulbs have never been better and finer than they are this year, so we are assured that the quality of our bulbs will be of the usual high standard.

There has been practically no increase in prices and we have been able to reduce prices on many of the newer varieties of Tulips and Daffodils.

We sincerely hope that from this list you may find the desired selections from the finest bulbs obtainable.

Tulip Planting

Tulips are flowers that have a beauty which cannot be compared to, or approached by any other flower. They can add beauty to a garden as individuals, small groups or mass color displays. Even a single plant nods defiance to its surroundings. There are several ways in which they can be planted so that their elegance can be used to the best advantage.

In bordering a bed, it is recommended that they be staggered about six to eight inches apart.

To enhance a perennial bed, groups of twelve or more tulips are very effective.

Mass beauty can be attained in a large bed by planting triangular wedges of from twenty-five to one hundred bulbs each, arranged so that they make a continuous pattern. This makes an outstanding display of combinations. Care should be taken in selecting adjacent colors and shades.

Tulips should be planted to a depth of from five to six inches, and if the soil is heavy, the addition of some sand and bonemeal will help the growth and bloom ability of the bulbs.

Our tulip bulbs usually arrive in September. Planting time extends from that date until the ground freezes solid, which is about Christmas.

Darwin Tulips

Darwin Tulips are distinguished by their strong, tall stems and large shapely flowers. They flower at the same time as Breeder Tulips, during the month of May.

Narcissi

Narcissi is the family of Spring Bulbs which embrace a number of classes, such as Jonquils, Daffodils, and Narcissus, or botanically speaking, Trumpets, Poetaz, Poeticus, Incomparabilis, etc. The varieties which we list are considered the best representatives of their respective classes. They can be used in mass plantings, borders, or in naturalizing of a woody hillside. Their culture is easy and they will last indefinitely.

They should be planted from six to eight inches deep and a yearly dressing of bonemeal and rotted manure keeps them blooming well.

ACTAEA, (Poeticus Narcissi) (Poet's Narcissus). Broad margined red eye set in a snowy white perianth. Very vigorous grower.

18c each **\$1.75** per doz. **\$12.00** per 100

Hardy Lilies

Through past experience we have found that our Imported Bulbs have been superior in size and quality to any others we have had. However, due to the length of time for shipping and curing of these bulbs they usually arrive too late in the Fall for us to make delivery on them. For this reason we pot these lily bulbs in five-inch pots and plunge them in cold frames and give them a chance to start root growth. When Spring comes they are well started and ready to plant in the garden by April 1st. This arrangement insures you of a healthy started bulb that will bloom the following Summer. We will be pleased to accept your order and deliver to you on that date.

In this climate, hardy lilies prefer a well drained, rich, loamy soil. They should be planted fairly deep and sand paced under an over the bulb.

LILIUM CANDIDUM, (White Madonna Lily). This beautiful lily produces 5 to 10 purest stately white flowers on a tall upright stem. Its delightful fragrance is not equalled by any other lily. Blooms in June. Plant bulbs 4 inches deep.

*Spring planting recommended; all others for Fall or Spring planting.

In addition to these plants, we grow many of the more common and easily grown shrubs such as Forsythias, Spireas, Persian Lilacs, Snowballs, Privet Hedge, etc.

Evergreens

We have growing at our Nursery at 96th and Blue River Drive a balanced stock of approximately fifteen thousand Evergreens. The upright trees range from two to eight feet in height, and the spreading types from eighteen inches to five feet. These trees are the best varieties for this climate and are ideal for foundation and group plantings.

Upon request we will be glad to come to your home and recommend what varieties are best suited to your particular situation. Our service also includes planting.

Our Office, Greenhouses and Sales Yard are located at 93rd and Holmes. You are invited to visit us at any time of the year.
